WESTERN MAINE — Your Best Source of Evergreens

When you order evergreens for quantity planting—you want hardy seedlings or transplants that will live and grow into thickly-foliaged, well-shaped trees. And that's the kind you'll always get at Western Maine.

Here at Western Maine, we use thoroughly tested methods of propagating, planting, fertilizing, irrigating, spraying and transplanting. . . . Methods that over the years have proven effective in growing strong, healthy trees with compact fibrous roots and thick, rich-green foliage. These techniques, combined with the superior advantages of our rich fertile soil and rugged Maine climate, produce evergreens that have proven highly profitable for our thousands of customers.

And, our huge volume of production (we grow millions every year) enables us to supply these better evergreens at surprisingly low prices.

So when quality, size, livability and price are all considered, thousands of wholesale customers continue to agree year after year that Western Maine is their best source of evergreens. We are sure you will, too.

Harry and Harold Eastman

Christmas Trees . . . Reforestation . . . Lining-Out Stock

Plant them for Christmas Trees, timber, or lining-out stock for growth into landscaping size evergreens—you're always sure of satisfactory results with Western Maine transplants or seedlings.

Our high quality, wide selection of varieties, and attractive prices have made Western Maine evergreens the choice of thousands of growers year after year.

This preference for Western Maine Evergreens means that demand for some varieties often exceeds the supply. That's why it pays to plan ahead and order yours early.

PLANT THIS SPRING!

Spring is the most popular planting time. Except for unusual circumstances, the soil is then in prime condition for planting and trees "take hold" quickly. Although there is considerable planting in the fall (many of our customers plant both seasons) spring sales constitute the greater part of our tremendous volume.

Because of this demand many varieties are oftensold out early. So it is wise to plan ahead and order your Western Maine Evergreens early. Our spring shipping season is from about April 15th until the middle of May.

How to Plant 1000 Trees a Day!

Western Maine Evergreens have strong, vigorous root systems which make them "take hold" better for a higher survival rate in all soils and climates.

When trees are unpacked, roots should be covered immediately by placing in a bucket of water or thin mud. This keeps roots from drying out. If a large quantity is to be kept for some time, trees should be "heeled in" by placing in a ditch or furrow and covering roots well with soil, then soaking thoroughly.

One man, using our specially designed planting spade, can plant up to 1000 trees per day. Follow these easy steps for rapid planting.

1. Insert spade straight into ground.
2. Pull back and push forward to form wedge shaped opening.
3. Spread roots carefully and place tree in hole.
4. Close opening, stamp soil on both sides firmly.

Our Written Guarantee Protects You

Harry

Western Maine's Guarantee

We guarantee that 90% of the transplants you buy from this Price List will live. If you will notify us before October 1, 1963, of the number over 10% which do not live, replacement will be made to equal 90% of the number originally purchased. If we are unable to furnish replacements in exact size originally purchased, we will

furnish them in the nearest size and variety. Shipments will be made by express collect or C.O.D. for postage.

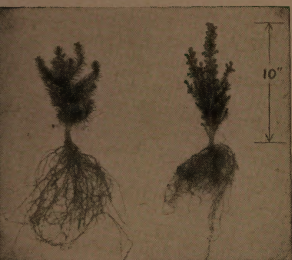

Trees shipped by freight or truck cannot be guaranteed.

TRANSPLANTING INFORMATION

The figure 2-2, shown in the price list, represents the number of years the trees have been in seed beds, the number of years in transplant beds and the number of times transplanted. The first figure indicates the number of years the trees remained in the seed bed before being transplanted. The second figure indicates the

number of years the trees remained in the transplant bed. The total of the figures indicates the age of the tree and each dash represents one transplanting. Thus, a 2-2 Douglas Fir is a 4-year-old tree which remained in the seed bed two years, was transplanted and remained in the transplant bed two years.

*RESTRICTIONS ON SHIPMENT OF PINES

Regulations prohibit shipment of any pines into the states of California, Montana, Nevada, Utah, Oregon, Washington, and Hawaii. In addition to the above states, White Pines may not be shipped into Arizona or Colorado.

SCOTCH PINE For several years we have been experimenting with various strains of Scotch Pine and with seed from different sources. We believe that we now have a very good selection to choose from. The Austrian Hill strain seems to be fast growing and have good color. The Spanish and French strains seem to be quite compact and have excellent color.
